## 1.0 Executive Summary

---

This is the final report detailing the findings in relation to the execution of the ADISA Testing Methodology on Claims Test ADPC0068 submitted by Celltech Mobile Services. The claims test was carried out in accordance with ADISA Claims Testing (ACT) v1.0 and supporting document ADISA Testing Methodology v1.0, both of which are available from ADISA.

The claim made for the drive was:

*“Celltech Mobile Service's software CMS-wipe, when used in accordance with user manual Version 1.0, will overwrite using algorithm Department of Defense (DoD 5220.22 M), all user data on the sample media to ensure that data cannot be recovered using forensic techniques aligned ADISA Test Level 1..” – Claim Number ADPC0068.*

Two mobile devices was submitted as part of this test and these are listed below:

<b>Family</b>	<b>Model</b>	<b>Test Level</b>
Apple iPhone 8 iOS 13.2.3	MRRM2B/A	1
Samsung Galaxy S9 Android 8.0	SM-G960F	1

Table 1 – Devices Tested

After testing it is confirmed that the Celltech Mobile Services claim is true for these devices tested up to Test Level 1 attacks.

## 2.0 Test Level 1 Testing

---

### 2.1 Simple Methodology.

This test phase is designed to evaluate the claim made by recreating an attack by a threat adversary utilising standard COTS forensic tools and techniques. (e.g. Cellebrite or Oxygen). For each device the following methodology is performed.

1. The applicant software was configured in accordance with the manufacturer's instructions.
2. A factory reset is performed on each device in accordance with the device manufacturers instructions.
3. A SIM was inserted into the device and the device connected to a Wi-Fi network.
4. The following data is placed on each device:
  - a. Pictures and Movies;
  - b. SMS, Phone Details and Contact Details;
  - c. Internet Browsing and Internet Email.
5. To create a Base Image for comparison the device was then imaged using Cellebrite or Oxygen
6. The device was then erased using applicant software in accordance with the manufacturer's instructions.
7. The device was then imaged using Cellebrite or Oxygen to create the test image.
8. The test image was then data carved to identify any images and the results compares and contrasted with the base-image constructed in step 5.

### 2.2 Test Results.

#### Test Level 1 Summary Results

Test Level 1 replicated an attack on this device being made by an aggressor with capabilities outlined below.

Risk Level	Threat Actor and Compromise Methods	Test Level
1 (Low)	Casual or opportunistic threat actor only able to mount high-level non-invasive and non-destructive software attacks utilising freeware, OS tools and COTS products. Commercial data recovery organisation able to mount non-invasive and non-destructive software attacks and hardware attacks.	1

#### The Results of Test Level 1

Family	Model	Result
Apple iPhone 8 iOS 13.2.3	MRRM2B/A	PASS
Samsung Galaxy S9 Android 8.0	SM-G960F	PASS

Pass means that the Celltech Mobile Services Software CMS-wipe v1.0 mitigates the threat posed by the Threat Actors holding the capabilities outlined by Test Level 1 on the tested device and the claim made can be confirmed.

### 3.0 Summary and Conclusions

---

**Claims Test Result:** Pass on all devices tested.

The device tested passed the claims test as all-forensic data recovery techniques up to and including ADISA Test Level 1 failed to recover any data. The software tested was the Celltech Mobile Services Software CMS-wipe v1.0.
