DISCLAIMER

The Product Claims Test is presented as the outcome of a specific test ran in laboratory environment under controlled conditions. Use of this certified product for the purpose of sanitizing data from devices tested needs to be done so after a risk assessment process. ADISA reserves the right to review the validity of this award upon changes in threat landscape.

LIABILITY

ADISA accepts no liability for any claims resulting from the use of the product tested.

1.0 Executive Summary

This is a final report detailing the findings in relation to the execution of the ADISA Testing Methodology on Claims Test ADPC0080 submitted by Aiken Informática, S.L. in January 2020.

The claims test was carried out in accordance with ADISA Claims Testing (ACT) v1.0 and supporting document ADISA Testing Methodology v1.0, both of which are available from ADISA.

The claim made for the drives tested was:

*"Aiken software called Aiken Workbench Version 2.x, when used in accordance with the Administrator's Guide and using ZEROS (recommended for HDDs) or ESE (recommended for SSDs) will overwrite all user data on the hardware sample within this test to protect to a forensic attack equivalent to test level 1 of the ADISA threat matrix.."*ADPC0080

Two devices were submitted as part of this test and these are listed below:

Test Media	Test Level
Samsung 860 QVO 1TB (MZ-76Q1T0) SATA SSD	1
Seagate Barracuda 1TB (ST1000LM048) SATA HDD	1

After testing it is confirmed that the Aiken Informática, S.L. **claim is true** for the devices tested up to Test Level 1 results. Those devices are:

- Samsung 860 QVO Model: MZ-76Q1T0
- Seagate Barracuda Model: ST1000LM048

2.0 Test Level 1 Testing Solid State and Electromagnetic Drives

2.1 Methodology.

This test phase is designed to evaluate the claim made by recreating an attack by a threat adversary utilising standard COTS forensic tools and techniques.

For each computer hard drive device, the following methodology is performed:

1. The device is connected to a target PC and place in a stable state.
2. The applicant software was configured in accordance with the manufacturer's instructions.
3. Structured data, the string "ADISA", was written to every logical block address on the hard drive.
4. The device was then imaged using standard imaging techniques to create a base-line forensic image.
5. The device was then erased using the applicant's software in accordance with the manufacturer's instructions.
6. The device was then analysed use using the following tools to create a second forensic image:
 - a. Standard commercial tools and techniques such as Access Data/FTK, Forensic Explorer and Encase.
7. The two forensic images (Stage 4 and Stage 6) were then compared and contrasted to ensure that all structured data had been removed.
 - a. For this test, there is no tolerance for remnant structured data and the result is a straight Pass or Fail.

2.2 Test Results.

Test Level 1 Summary Results

Test Level 1 replicated an attack on these devices being made by an aggressor with capabilities outlined below.

Risk Level	Threat Actor and Compromise Methods	Test Level
1 (Low)	Casual or opportunistic threat actor only able to mount high-level non-invasive and non-destructive software attacks utilising freeware, OS tools and COTS products. Commercial data recovery organisation able to mount non-invasive and non-destructive software attacks and hardware attacks	1

The Results of Test Level 1.

Hard Drive/Model	Result
Samsung 860 QVO 1TB (MZ-76Q1T0) SATA SSD	PASS
Seagate Barracuda 1TB (ST1000LM048) SATA HDD	PASS

Pass means that the Aiken Workbench 2.1 mitigates the threat posed by the Threat Actors holding the capabilities outlined by Test Level 1 on the tested devices and the claim made can be confirmed.

3.0 Summary and Conclusions.

Claims Test Result: Pass on all devices tested.

The two devices passed the claims test as all-forensic data recovery techniques up to and including ADISA Test Level 1 failed to recover any data. The software tested was the Aiken Workbench 2.1

Claims Test Carried Out By: Professor Andrew Blyth, PhD.
