CONFIDENTIAL

1.0 Executive Summary

This is a report detailing the findings in relation to the execution of the ADISA Testing Methodology on Claims Test ADPC0084 submitted Shenzhen Anxin Technology Co. Ltd in March 2020.

The claims test was carried out in accordance with ADISA Claims Testing (ACT) v1.0 and supporting document ADISA Testing Methodology v1.0, both of which are available from ADISA.

The claim made for the phone was:

“Shenzhen Anxin Technology Co Ltd software called MDW v3.0 when used in accordance with MDW Client Operational m manual v3.0 and using algorithm DoD 5220.22 M, will overwrite all user data on the hardware sample within this test to protect against a forensic attack equivalent to test level 1 of the ADISA threat matrix” ADPC0084

Two devices were submitted as part of this test and these are listed below:

Device			Test Level
iPhone 8	Model:	MRRM2B/A	1
Samsung Galaxy S9	Model:	SM-G960F	1

After testing it is confirmed that the Shenzhen Anxin Technology Co. Ltd **claim is true** for the devices tested up to Test Level 1 results. Those devices are:

- iPhone 8 Model: MRRM2B/A
- Samsung Galaxy S9 Model: SM-G960F

2.0 Test Level 1 Testing Smart Phones and Tablets

2.1 Methodology.

This test phase is designed to evaluate the claim made by recreating an attack by a threat adversary utilising standard COTS forensic tools and techniques. (e.g. Oxygen). For each device the following methodology is performed.

1. The applicant software was configured in accordance with the manufacturer's instructions.
2. A factory reset is performed on each device in accordance with the device manufacturers instructions.
3. A SIM was inserted into the device and the device connected to a Wi-Fi network.
4. The following data is placed on each device:
 - a. A standard pin to unlock the device '123456' and WIFI credentials;
 - b. Pictures and Movies;
 - c. SMS, MMS, Phone Calls;
 - d. Contact Details and Diary Events
 - e. Internet Browsing and Internet Email.
5. To create a Base Image for comparison the device was then imaged using Oxygen.
6. The device was then erased using applicant's software in accordance with the manufacturer's instructions.
7. The device was then imaged using Oxygen to create the test image.
8. The test image was then data carved to identify any images and the results compares with the base-image constructed in step 5.

2.2 Test Results.

Test Level 1 replicated an attack on this device being made by an aggressor with capabilities outlined below.

Risk Level	Threat Actor and Compromise Methods	Test Level
1 (Low)	Casual or opportunistic threat actor only able to mount high-level non-invasive and non-destructive software attacks utilising freeware, OS tools and COTS products. Commercial data recovery organisation able to mount non-invasive and non-destructive software attacks and hardware attacks.	1

The Results of Test Level 1

Family	Operating System	Result
Apple iPhone 8	iOS 13.2.3.	PASS
Samsung Galaxy S9	Android OS 8.0.0	PASS

Pass means that MDW v3.0 mitigates the threat posed by the Threat Actors holding the capabilities outlined by Test Level 1.

3.0 Summary and Conclusions

Claims Test Result: Pass on all devices tested.

The two devices passed the claims test as all-forensic data recovery techniques up to and including ADISA Test Level 1 failed to recover any user data. The software tested was the Shenzhen Anxin Technology Co. Ltd called MDW v3.0
