CONFIDENTIAL

1.0 Executive Summary

This is a report detailing the findings in relation to the execution of the ADISA Testing Methodology on Claims Test ADPC1115 submitted by Neva Systems in April 2021.

The claims test was carried out in accordance with ADISA Claims Testing (ACT) v1.0 and supporting document ADISA Testing Methodology v1.0, both of which are available from ADISA.

The claim made for the phone was:

“Neva Systems Ltd product called NSYS Diagnostics v 1.0.x.x when used in accordance with user manual NSYS Data Erase Manual will erase all user data and content on the media listed in Section 3. Within this test to protect from a forensic attack equivalent to Level 1 of the ADISA threat matrix.” – ADPC1115

Three devices were submitted as part of this test and these are listed below:

<i>Device</i>	<i>Test Level</i>
iPhone 11 iOS 14.6	1
Samsung Galaxy S20 Android 11	1
iPad 2 iOS 9.3.5	1

After testing it is confirmed that the ADPC115 **claim is true** for the devices tested up to Test Level 1. Those devices are:

- iPhone 11 Running iOS 14.6
- Samsung Galaxy S20 Running Android 11
- iPad 2 Running iOS 9.3.5

2.0 Test Level 1 Testing Smart Phones and Tablets

2.1 Methodology.

This test phase is designed to evaluate the claim made by recreating an attack by a threat adversary utilising standard COTS forensic tools and techniques. (e.g. Oxygen). For each device the following methodology is performed.

1. The applicant software was configured in accordance with the manufacturer's instructions.
2. A factory reset is performed on each device in accordance with the device manufacturers instructions.
3. A SIM was inserted into the device and the device connected to a Wi-Fi network.
4. The following data is placed on each device:
 - a. A standard pin to unlock the device '123456'
 - b. WIFI credentials;
 - c. Pictures and Movies;
 - d. SMS, MMS, Phone Calls;
 - e. Contact Details and Diary Events
 - f. Internet Browsing and Internet Email;
 - g. Email/Gmail account.
5. To create a Base Image for comparison the device was then imaged using Oxygen.
6. The device was then erased using applicant's software in accordance with the manufacturer's instructions.
7. The device was then imaged using Oxygen to create the test image.
8. The test image was then data carved to identify any images and the results compares with the base-image constructed in step 5.

2.0 Test Level 1 Testing Smart Phones and Tablets

2.2 Test Results.

Test Level 1 Summary Results

Test Level 1 replicated an attack on these devices being made by an aggressor with capabilities outlined below.

Risk Level	Threat Actor and Compromise Methods	Test Level
1 (Low)	Casual or opportunistic threat actor only able to mount high-level non-invasive and non-destructive software attacks utilising freeware, OS tools and COTS products. Commercial data recovery organisation able to mount non-invasive and non-destructive software attacks and hardware attacks.	1

The Results of Test Level 1

Family	Operating System	Result
Apple iPhone 11	iOS 14.6	PASS
Samsung Galaxy S20	Android 11	PASS
Apple iPad 2	iOS 9.3.5	PASS

Pass means that *ADPC115* mitigates the threat posed by the Threat Actors holding the capabilities outlined by Test Level 1.

3.0 Summary and Conclusions

Claims Test Result: Pass on all devices tested.

The three devices passed the claims test as all-forensic data recovery techniques up to and including ADISA Test Level 1 failed to recover any data. The software tested was the Neva Systems NSYS Diagnostics software v 1.0.x.x.
